

# Project Overview

This document details the testing efforts conducted as part of Day 5 for the 'Food Tuck' marketplace. The focus was on the performance optimization, error handling, and UI features.

## Testing Report Overview

I have included the unique identifier for the each test case and have given a brief description of how the tests were conducted and what errors did I witnessed.

Testing file:  Testing Reports - Food Tuck

## Testing Summary

Most crucial features including page optimization were tested.

Most of the errors found were resolved including user verification and dynamic routes.

Performance testing was also performed by utilizing powerful tools as lighthouse.

## Conclusion

The Testing phase has ensured the Food Tuck marketplace lacks a few Necessities as cart functionality. However, such faults have been taken into immediate consideration and are expected to be resolved by this weekend.

Because of Lack of funds, the marketplace may not be live for a short period of time though, constant efforts are being put into progress which would hopefully be assertive.
